DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a device for measuring the movement of an object (due to respiration), classified in class 600, subclass 536.
 - II. Claims 19-38, drawn to a device for measuring the signals corresponding to the change in the area or volume of at least one object within a homogenous magnetic field due to the cardiac function of the object, classified in class 600, subclass 527.
 - III. Claims 39-40, drawn to a method of measuring the area or volume of an object, classified in class 073, subclass 861.11.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, II and III are directed to related apparatus and process inventions, wherein the inventions as claimed are mutually exclusive, i.e., there is no apparatus/process that would infringe any two of the above inventions. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed have different function and effect, i.e. Group I's function is to measure the movement of an object, Group II's function is to measure signals

Art Unit: 3735

corresponding to the change in area or volume caused by cardiac function, and Group II's function is to measure the area or volume of an object (generally). Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 3735

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
